

S.T.E.A.D.Y. Worship Production Response

Jamar Jones / Production Leadership Conference / October 10 2026

S Stabilize yourself

State the observable problem. Use a brief pause when appropriate and speak clearly. Immediate protective action takes precedence.

T Triage the situation

What is known? Who is affected? What gets worse if we wait? Separate observations from assumptions.

E Establish the next plan

Choose a feasible fallback that preserves the ministry purpose. Confirm the decision owner when instructions conflict.

A Assign and announce

Name each action owner. State the change and timing. Receive critical acknowledgments or readbacks.

D Do and double-check

Execute and verify the result at the affected endpoint. Report house and online recovery separately. Repeat the cycle when needed.

Y Yield to learning

After stabilization, review the facts and what people knew. Choose one improvement with an owner, date, and rehearsal.

Priority order

People and safety. Dignity and pastoral care. Intelligible participation. Service continuity. Enhancements. Assess severity across audiences and assign parallel work when appropriate.

Communication pattern

Receiver + action + timing + acknowledgment + completion report.

"Video, hold the closing clip until producer calls. Confirm."

"Video held until producer calls."

Recovery check

What evidence tells us people can participate again? A delivered backup or moving meter alone does not establish the audience experience.

This is a conference teaching tool. Confirm local roles, privacy guidance, and emergency procedures with your church leaders.
